Developer training**

WebServices

WebService

- **From Wikipedia:**
- **The World Wide Web Consortium defines the provision of webservices as support for the cooperation between various application programs that are operated on different platforms and/or frameworks.**
- **A webservice is a software application that is uniquely identifiable with a Uniform Resource Identifier (URI)**
 - Generally client programs send inquiries to a webservice and this service replies with the desired information.
 - The interaction between WebService and client program is carried out under the use of XML-based messages

WebService

- Via the function **PostURL()** data can be sent from the camos application to a **WebService**
- The reply of the **WebService** is available via the return value of **PostURL()**
- A camos Develop application can also be used as **WebService** -> **camosWebServiceQuery**
- **Online help:**
 - [Function reference/Other Functions/PostURL \(URL, Type, Data\)](#)
